Data Standards for Microarray Data

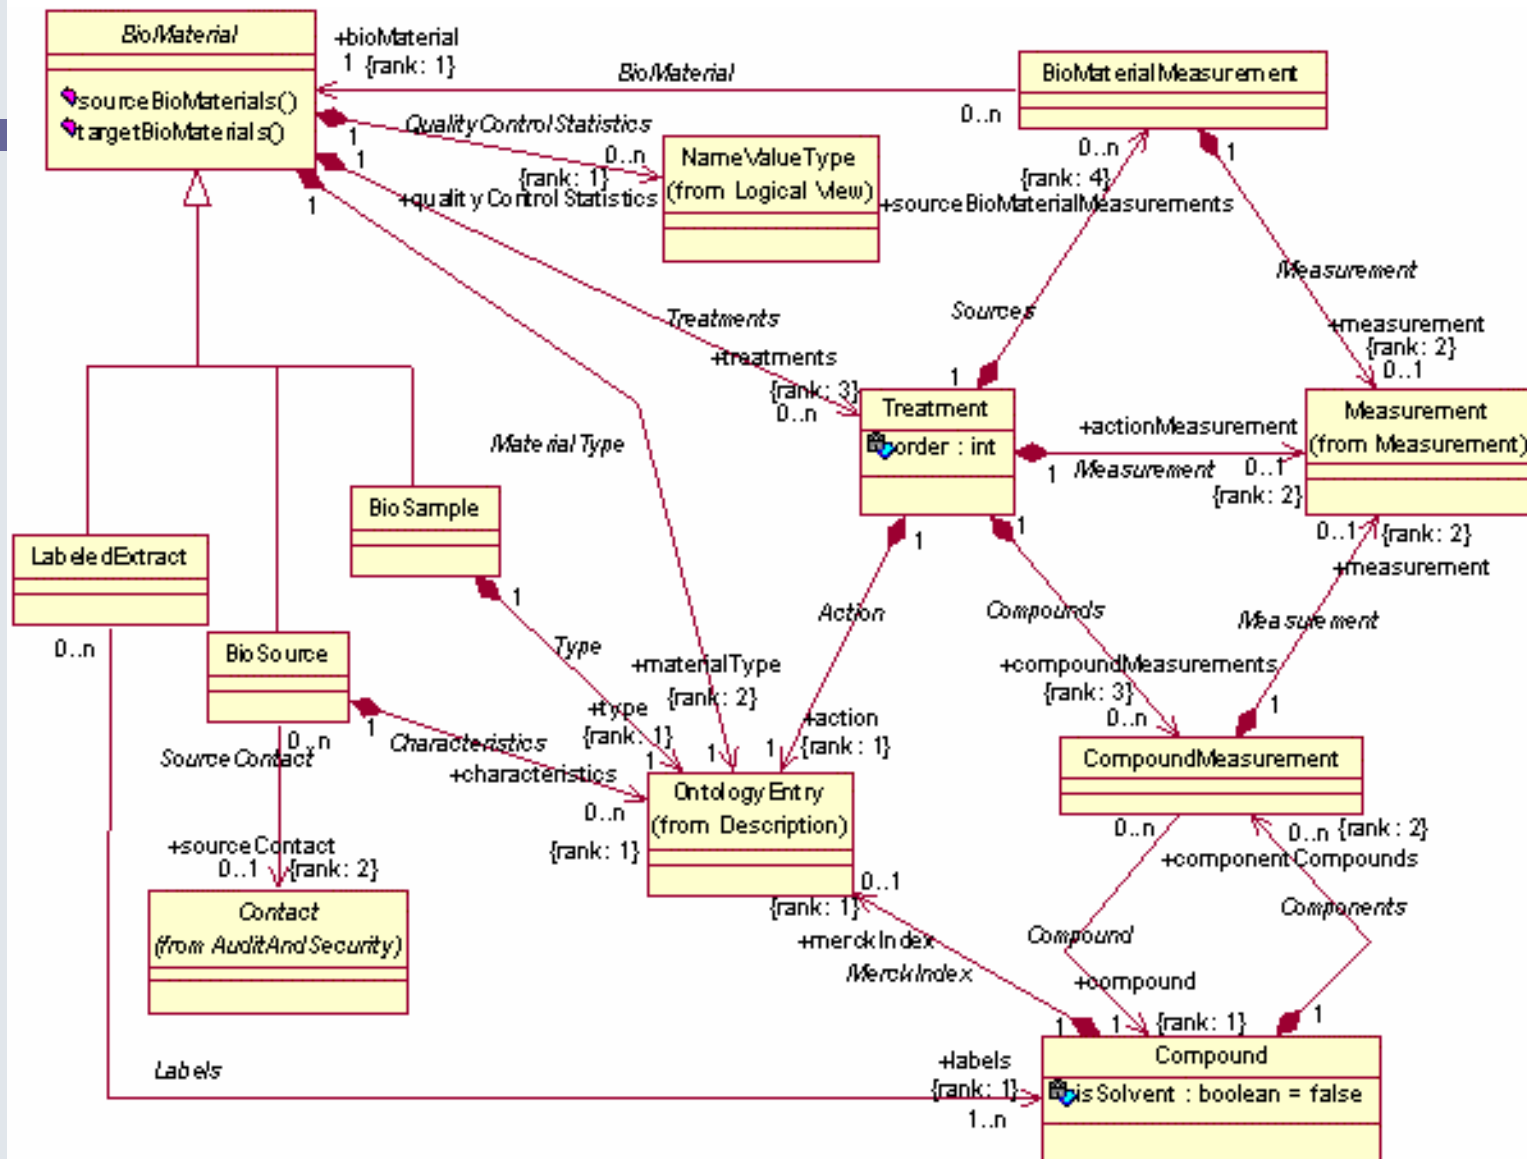

Components of MAGE-OM

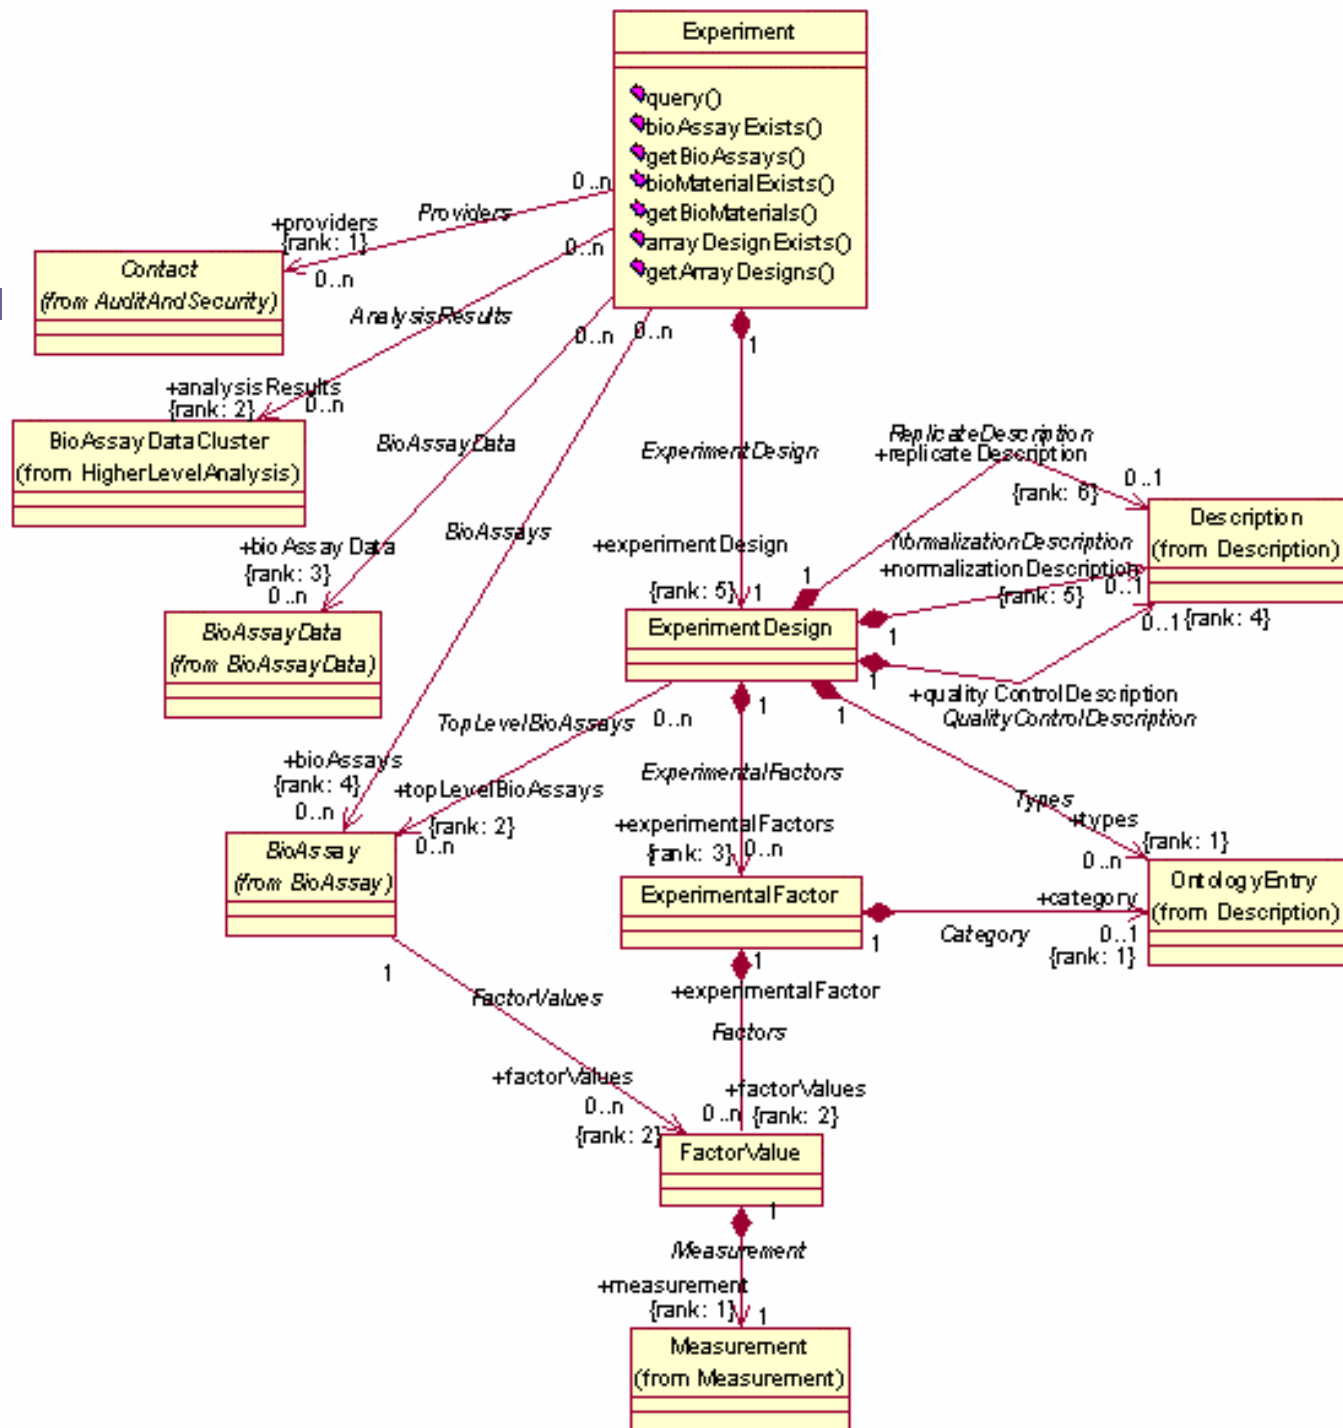

- ▶ Array design and manufacture
- ▶ Biological sample source detail and generation
- ▶ Actual data and images from array hybridizations
- ▶ Clustering results
- ▶ Experimental design details

MAGE Design Team

- ▶ MGED Members (mostly Stewart, Spellman, and Sarkans)
- ▶ Rosetta (Michael Miller and Doug Bassett)
- ▶ Agilent (Charles Troup)
- ▶ Affymetrix (Steve Chervitz and Derek Bernhart)
- ▶ NetGenics/Lion Bioscience (Scott Markel)

BioMaterial

The MAGEstk

- ▶ Freely available software collection (MIT open source license)
- ▶ Includes
 - MAGE-ML Parsers for:
 - Perl -- Complete and functional
 - Java -- Complete and functional
 - Data annotation tool (MIAME Express)

MGED Ontology (MO)

- ▶ Purpose
 - Provide standard terms for the annotation of microarray experiments
- ▶ Benefits
 - Unambiguous description of how the experiment was performed
 - Structured queries can be generated
- ▶ Ontology concepts derived from the MIAME guidelines/MAGE-OM

Relationship of MO to MAGE-OM

- ▶ MO class hierarchy follows that of MAGE-OM
 - Association to OntologyEntry
- ▶ MO provides terms for these associations by:
 - Instances internal to MO
 - Instances from external ontologies
 - Take advantage of existing ontologies

MAGE and MO

Usage of SurfaceType

Classes

C PhysicalArrayDesign

- Individuals

- I polylysine
- I aminosilane
- I unknown_surface_type
